

## Request for Gigaclear to lay broadband cables across the Common

- To get highspeed broadband to the Estovers building there are two options; both are expensive due to the long distance that cabling needs to be brought from an appropriate junction box.
- **BBOWT and the Council request permission from the Commission to agree for Option 1 to be suggested to Gigaclear as the preferred option.**
  - **Option 1** requires cabling to be brought across the 'grazable' Common principally following the path network with some minor deviations, whereas;
  - **Option 2** is mostly along the Burys Bank road (some of which would be situated outside of the common land boundary), which is a longer stretch and subsequently more expensive.
- Once approved the council and BBOWT will begin drawing up the necessary legal agreements to proceed with the approved option. At this stage there is no detail on the methodologies applied. Once this has been worked out, then this information can be presented to the Commission for information, if they require.
- **If the preferred option is declined by Gigaclear then the Commission give consent for the option 2 to go ahead.**

### Option 1. Broadband feed coming across the common

**Option 2. Broadband feed coming along Burys Bank road**
